

PURCHASE A R1,500,000 PROPERTY
THREATENING MY FINANCIAL GOALS?

FINOS

FINOS

FINOS · CASE STUDY

**No CFO will approve
R2 million because ‘the AI
recommended it.’**

3 trust patterns I designed into FINOS.

THE PROBLEM

AI can analyse faster than any finance team.

But speed means nothing without trust.

The AI shows how sure it is.

Low confidence means ‘check this.’

✦ CASH FLOW New

Spending increased 18%

Discretionary spending is 18% above your six-month

● High confidence

✦ SAVINGS New

Emergency reserve below target

Your reserve covers 1.6 months of expenses against a

● Moderate confidence

Confidence on every insight

Every recommendation shows the data behind it.

A R300,000 deposit lands at R12,183 a month and leaves 6 months of cover against R67,283 of monthly outflow for your rent. The deposit is drawn from your portfolio, reducing your monthly commitment but leaves less invested; a smaller amount is invested and raises the commitment and total interest.

- Borrowing stays at 80% of the property value, within borrowing ceiling
- Monthly surplus remains positive at R11,217
- ▲ Cash cover reaches 5.5 of the 6.0 months this decision results in a R35,896 shortfall

The evidence behind it

‘This forecast assumes Q4 revenue holds.’

Now the CFO can challenge the logic.

ASSUMPTIONS

Income. R78,500 monthly, no increase modelled.

Expenses August level

Simulated deterministic model for demonstration. Not financial

Assumptions stated upfront

Approvals: all three patterns at the moment of decision.

Balanced approach

1

● Moderate confidence

2

A R300,000 deposit lands at R12,183 a month and leaves R3 months of cover against R67,283 of monthly outflow once the deposit is drawn from your portfolio, so a large monthly commitment but leaves less invested; a smaller one invested and raises the commitment and total interest.

- Borrowing stays at 80% of the property value, within the 80% borrowing ceiling
- Monthly surplus remains positive at R11,217
- ▲ Cash cover reaches 5.5 of the 6.0 months this decision asks for R35,896 shortfall

WHAT I'D IMPROVE

Decision History records what happened, but not why.

That's my next iteration.

The screenshot shows a list of decisions in a light gray box. Each entry has a diamond icon, a title, a 'Saved' status, and a description. The second entry, 'Emergency reserve target', is highlighted with a blue border. A blue line extends from the bottom of this entry to a blue callout box.

Decision	Status	Description
Portfolio allocation review	Saved	Maintain allocation Reviewed technology drift; agreed to reassess at
Emergency reserve target	Saved	Raise to R120,000 Reserve raised from 1.6 to 2.0 months of expense

What happened, not why

THE PRINCIPLE

AI in finance shouldn't replace judgement.

It should give people enough context to use their own.
