3 Years Experience

16+ Projects Delivered

4+ Projects Led

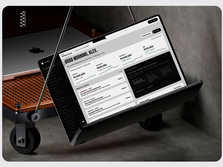
I'm Sphamandla Xaba, a Product Designer and AI UX Designer focused on complex products, operational systems and AI-powered experiences. I combine UX strategy, product thinking, interaction design and emerging AI capabilities to turn ambiguous problems into useful, intuitive products.

SELECTED WORK

Products built around real problems.

A selection of products, systems and digital experiences spanning finance, enterprise, operations, connectivity and consumer experiences.

View All Case Studies



Financial Operating System

Designing an AI-powered financial operating system that brings financial intelligence, decision-making and portfolio management into one connected experience.

WHAT I DESIGN

I design products, systems and experiences not just screens.

The strongest digital experiences happen when strategy, technology and interaction design work together.

UI/UX PRODUCT DESIGN

From ambiguous problems to structured product experiences, I design interfaces and journeys that balance user needs, business objectives and technical realities.

UX STRATEGY

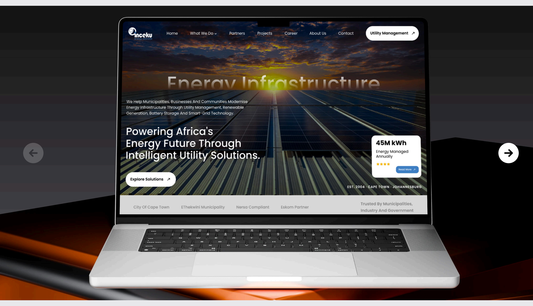
I connect research, product thinking, interaction design and validation to make better design decisions—not simply better-looking interfaces.

COMPLEX SYSTEMS

I turn complicated workflows, information architectures and operational processes into understandable digital systems.

AI UX DESIGN

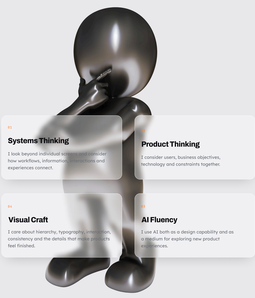
I explore how AI can improve product experiences through intelligent assistance, automation, recommendations, contextual interactions and conversational interfaces.



VALUE / CAPABILITIES

What i bring to a Product team

I bring a product mindset grounded in clarity, systems thinking and intentional use of technology. I focus on understanding real user and business problems, then designing solutions that are not only functional, but meaningful, scalable and easy to understand.



VALUE / CAPABILITIES

A designer focused on where product design is going next.

I'm Sphamandla Xaba, a South African Product Designer and AI UX Designer interested in the intersection of product design, complex systems and emerging technology. My work spans AI products, enterprise systems, operational platforms, websites and digital experiences.

I enjoy working on problems where the challenge isn't simply making an interface look good, but figuring out how the experience should actually work.

HAVE A COMPLEX PRODUCT PROBLEM?

Let's make it simpler.

I'm interested in working with teams building products that solve meaningful problems—and figuring out how those products can become simpler, smarter and more useful.
